Victim of verbal, emotional, financial, sexual abuse < 3 months prior to MC	72%	83.3%

Populations Served

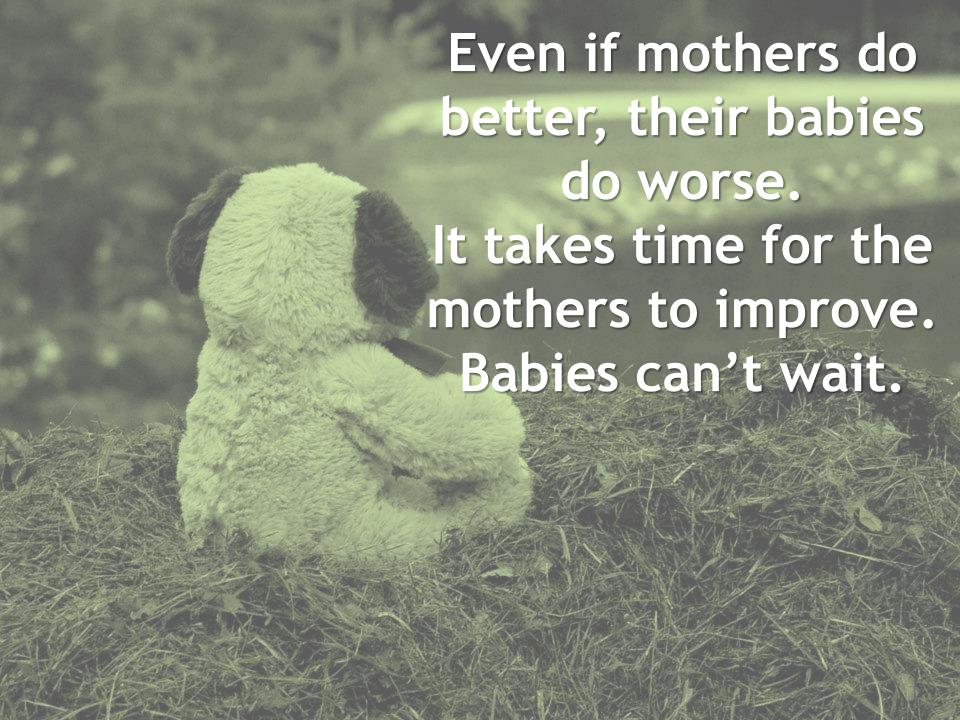

- ▶ Black/African Canadian
- Indigenous
- Teens living in poverty

Teen mothers vs other teens of similar backgrounds who delayed childbirth (Smith Battle 2009)

- Educational or economic outcomes (Corcoran & Kunz, 1997; Holmlund, 2005)
- Risk-taking, delinquent behavior, and substance abuse (Hope, Wilder & Watt, 2003; Hunt, Joe-Laidler, & MacKenzie, 2005).
- In their 30's and 40's (Furstenberg, 2007; Werner & Smith, 2001)

How we make it worse

Stigma Defined

- ► The co-occurrence of labeling, stereotyping, separation, status loss and discrimination,
- In a context within which power is exercised.

(Hatzenbuehler et al 2013)

Impact of Stigma

- Discrimination
- Social isolation
- Self-esteem, poor self-regulation, smoking and substance use

Pregnant teens and stigma

(Wiemann et al, 2005)

39.1% of low income teens 48 hours after delivery:

- Felt discrimination from families, teachers, peers
- Absence of social support circles
- History of more drug abuse, exposure to violence, etc.
- Those who had more adaptive attitudes before hand felt less stigmatized

"When Children Have Children"

Website of the American Academy of Child and Adolescent Psychiatry (AACAP)

- "Babies born in the U.S. to teenage mothers are at risk for long-term problems in many major areas of life, including school failure, poverty, and physical or mental illness. The teenage mothers themselves are also at risk for these problems."
- "Teenage pregnancy is usually a crisis for the pregnant girl and her family"

Stigma is a threat

*Adolescents are able to make reasoned decisions about their health and medical treatment (usually with the support and guidance of their families) but at the same time are liable to faulty judgment when it comes to situations in which they feel attacked or threatened, misperceive the degree of danger involved to themselves or others, or fail to appreciate the consequences of their actions." (Flaherty, 2014)

Prenatal Stress

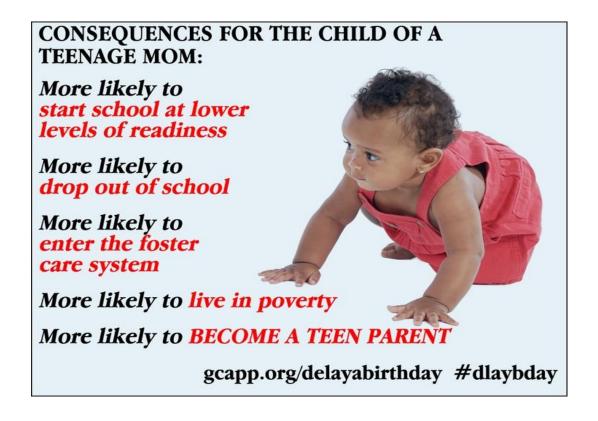

- Dependent on the quality of the maternal child relationship (Bergman et al 2010)
- Cognitive development for children born at risk (Landry, Smith, Miller-Loncar, & Swank, 1998);

Early Life Stress

- Chronic adversities early in life (ACE studies)
- Exposure to maternal depression/stress during the infancy (e.g., Brennan et al., 2008; Halligan et al., 2007; Lupien, King, Meaney, & McEwen, 2000).
- Cumulative negative aspects of family dynamics (Evans, 2003, Flinn&England, 1995)

Children of Teen Mothers - Outcomes

Infant and Early Childhood Mental Health

What it is?

Social and emotional mental health, is developing the capacity of the child from birth to 5 years old to form close relationships, manage and express emotions, and explore the environment and learn.

Zero to Three, Parenting Resource

We know teen mothers can do well.

We know their babies depend on mothers doing well before the babies are born and when the babies are in their first years.

How can policy makers help?

How Can Policy Makers Help?

- Teen pregnancy strategy
- Infant and early childhood mental health policies
- Address the child protection system, especially for Black and Indigenous peoples
- Review government and professional policies

Social Return On Investment (SROI)

RAND Corporation, every dollar spent in the first 2 years of a child's life saves the system \$7

[Note: Estimates vary from 1.8 to 17 times saving per dollar spent in the first 2 years on educational, psychological or psychiatric services]
